

Household Services App: Project Report

MAD-1 SEP 2024

Approach

- Login Functionality - A single and simple login page for all users is created with email validation implemented in frontend and password validation in backend.
- Dashboard - A javascript file is created for dashboard page in order to link tables. For example - Clicking professional_count in service table hides the service table first then makes the associated professionals' details visible. An exit button provided in order to go back to initial table.
- Service Request - A set of cards showing available service categories is visible to end-user's dashboard. Clicking any one would take you to a list of available services under that category each with a book button.
- Searching - Each record in table is provided with id containing important details of the record. A javascript file attached with search page compares value entered in search bar with the id values and makes the records visible and hidden accordingly.
- Professional - A professional can submit resume to the register form and upon approval from admin can see/accept/reject all requests on his/her dashboard under their service category.
- Summary - A summary page is provided to admin, professional and user page containing related stats in form of chart. Implemented using Chart.js it does not require to be stored in backend and generates dynamically everytime.

Web-App Endpoints

- **Miscellaneous**

/	#home page
/login	#login page
/register	#register page
/proRegister	#professional register page

- **Admin**

/admin/dashboard	#admin dashboard
/<proId>/professional/approve	#admin approves professional
/<proId>/professional/reject	#admin rejects professional
/<proId>/professional/details	#admin looks professional details
/<proId>/professional/remove	#admin removes professional
/<proId>/professional/ban	#admin bans professional
/<userId>/customer/ban	#admin bans customer
/<userId>/customer/remove	#admin removes customer
/<cId>/service/create	#admin creates service
/<sid>/service/details	#admin looks service details
/<sId>/service/modify	#admin modifies service
/<sId>/service/remove	#admin removes service
/<catId>/category/details	#admin looks category details
/category/create	#admin creates category
/<catId>/category/remove	#admin removes category
/<catId>/category/modify	#admin modifies category
/<rid>/request/details	#admin looks request details
/admin/summary	#admin summary page
/admin/search	#admin search page

- **User**

/<userId>/dashboard	#user dashboard
/<userId>/<sId>/book	#user books service
/<userId>/<rId>/cancel	#user cancels booking
/<userId>/<rId>/remove	#user removes request
/<userId>/<rId>/close	#user closes request
/<userId>/customer/search	# user search page
/<userId>/summary	# user summary page
/<userId>/user/delete	# user deletes account

- **Professional**

/<proId>/professional/dashboard	# professional dashboard
/<proId>/<rId>/accept	#professional accepts request
/<proId>/<rId>/reject	#professional rejects request
/<proId>/professional/search	#professional search page
/<proId>/professional/summary	#professional summary page
/<proId>/pro/delete	# professional deletes account
